Professional Summary

Java Developer with **5 years** of experience in developing web applications using **Java, Spring Boot, Angular, and Microservices**. Experienced in building REST APIs, deploying cloud-based applications on Google Cloud Platform (GCP).

Professional Experience

Senior Software Developer – Tech Mahindra (Client: Ford Motor Company) Duration- 1 year 10 months

ESRA (Electronic Supplier Risk Assessment)

An internal application used to assess suppliers. The application helps site engineers review suppliers and manage supplier assessments. Users can create, update, view, and delete records based on their assigned roles.

- Implemented role-based access for different users.
- Developed CRUD operations for supplier assessment records.
- Integrated LDAP for fetch user details.
- Deployed the application on Google Cloud Platform (GCP).
- Fixed production issues and supported new feature development.

Technologies: Java, Spring Boot, Angular, REST API, LDAP, MySQL, GCP, Git

Template Hub

An internal application that enables users to create UI screens by selecting from a collection of pre-built reusable components. After designing the wireframe, users can download a complete Angular or React project with the selected components and project structure.

- Users can build UI pages by dragging and arranging existing reusable components.
- Users can download the page with the source code of Angular or React templates.
- Used Google Cloud Secret Manager to securely manage application configuration and credentials.
- Deployed the application on Google Cloud Run.
- Implemented project packaging as downloadable ZIP files with the required project structure and README file.
- Developed Python scripts to verify component information stored in the database with angular components

Metrics Dashboard

An analytics application used to monitor how users interact with internal applications.

- Designed and developed a real-time analytics dashboard to monitor user interactions across applications like Template Hub.
- Developed REST APIs to collect and serve metrics data for visualization
- Displayed download and usage statistics.
- Designed and implemented interactive charts and dashboards for real-time insights

Software Development Engineer – Lumen Technologies , Duration – 3 years 2 months

IPCenter

A microservice application used to transfer tickets between different systems.

- Developed microservices using Java and Spring Boot.
- Developed REST APIs.
- Integrated ActiveMQ for messaging.
- Worked on Incident, Change, and Service Requests.
- Deployed applications on Apache Tomcat.
- Fixed production issues.

Operation Center Portal

A web application used to manage customer configurations.

- Developed frontend screens using Angular.
- Created forms for customer configuration.
- Implemented dynamic field mapping.

Ebonding Configuration Portal

A web application used to manage mapping between ServiceNow and Remedy.

- Developed frontend using Vue.js.
- Created screens to manage mapping values.
- Worked with backend APIs.

Technical Skills

Category	Skills
Programming Languages	Java (Core, Java 8), Python (Basic)
Backend	Spring Boot, Microservices, REST APIs
Frontend	Angular, Vue.js
Database	MySQL, Redis
Messaging	Kafka, ActiveMQ
Cloud	Google Cloud Platform (GCP)
DevOps	Docker, Kubernetes, Jenkins
API & Security	OpenAPI (Swagger), 42Crunch API Security, API Conformance Scan
Tools	Git, Maven, Jira, Tomcat

Education

Bachelor of Engineering (Electronics and Communication Engineering)
Coimbatore Institute of Technology
2017–2021

Certification

- Microsoft Azure Fundamentals (AZ-900)
